2012 to 2013

Q10021202- Install latest driver 1.20.00.22-20120105 with Oracle Solaris 11, it can then see the drives. When I reboot Solaris starts to load then the machine reboots.

The root cause of this issue is a solaris installer bug which does not exist in older revisions. The installer did not add the corresponding aliases into the system and result driver has not been loaded while start up. To add the aliases, please follow these procedures below:

After Solaris 11 installation completed, and before reboot system.

a. Open a terminal window.

b. #su

password:solaris

c. # echo 'arcmsr "pci17d3,1880"' >> /a/etc/driver_aliases

bootadm update-archive -R /a

Unique solution ID: #1334
