

**2021 to 2024**

**Q10032408 - Raid 6 groups has 2 hard drives that failed, and one hard drive has been replaced first.If I replace the second hard drive, will the rebuilding time be counted with the first HDD? Or should we add more time?**

These two rebuilds are separated because two failed drives were replaced separately.

If you replace two failed drives at once, controller will rebuild raid6 volume with two drives in the same time.

Unique solution ID: #2043
