Q10012201 - The RAID 6 array using advanced format 512e drive is currently in degraded status with one failed drive. I've added the 4Kn drives as hot spares but the array wouldn't rebuild. Should I just get 512byte sector drives?

The 4kn drives can be used in arrays with 4k block size only. Array will use 512b block size if you create volume with LBA64 mode. LBA64 is the standard block size for over 2TB devices.
