

Q10041405 - Areca card can't pass the correct events time. The reported events from Areca will have a strange date-time format.

Once the raid card restarted, the card have no idea about the datetime outside, it can just record the "timestamp", the correct datetime need to be set by one of BIOS/CLI/HTTP. If the datetime is abnormal, please enter cli and execute "sys synctime p=0" to synchronize the time.
