

Q10121501 - How can we update the on-board expander firmware on the ix series RAID adapters?

You can use the CLI, RS232 port and controller firmware to update the expander firmware on the 6 Gb/12Gb ARC-1880/1882/1883ix board. For controller update, expander firmware will be re-packed to add one header for controller firmware to identify it.

Unique solution ID: #1012
