

Q10071410 - I'd like to know how to set and keep the clock settings for the PCI e RAID controller without using NIC. Everytime I look at the event log, the times are off, thus making the logs useless.

PCIe RAID controller BIOS and web browser login will send the clock settings to the controller. For Mac user, please use the archhttp utility to synchronize the system time. From archhttp utility 2.4.3 version, it has included the function to synchronize the system time.

Unique solution ID: #1151
