

Q10041303 - I bought areca 1213-4i. I know, that yours adapter can create raid in MBR with 3 TB and more, but i don't understand how to do it.

Unfortunately, XP system does not support GPT, you have to create volumes less than 2TB. You can create a 4KB sector mode for volumes with over 2TB capacity. Since 4KB mode is not a standard sector size for storage, you need to confirm all your applications without any issue on it.

Unique solution ID: #1251
