Q10011308 - Install W2K8 on a two array partition of the ARC-1222. The driver loading and RAID volumes are now listed. Unfortunately, when I try to install (Disk 1 Partition 1, 232.8 GB, Type: System), Windows throws: "Setup was unable to create a new system partition or locate an existing system partition".

The error was due a second array formatted as primary partition. The Windows partition doesn't seem to handle that very well. By putting this second array offline via the Web GUI and get it up and running with both the arrays active after it has done the installation. This may be a Windows installer problem if multiple storage exist especially some storage have big capacity.
