

Q10051310 - Does your RAID cards support something like “Advanced Data Mirroring”?

Advanced Data Mirroring is a new RAID function. It makes three full copies of the data, so it is possible to lose 2 disk drives and not lose any data. Areca hasn't such function but we have another function on new products can provide similar protection : 3 drives array works with two members failed.

Unique solution ID: #1289
