# 2018 to 2020

# Q10041101- Will support for 3TB hard drive be added in the next 3Gb/s SATA/SAS series RAID FW release?

Regarding 3TB drive support, please visit our ftp site download the new firmware version 1.49. Please note, desktop drives always not recommended.

Both hard drive vendors and us recommend enterprise drives for best reliability. These enterprise drives are designed for 24/7 applications such as array. There have many unstable array issues related with desktop drives before, because desktop drives may not reliable enough if the environment is unstable. HDD vendors don't support desktop drives on RAID applications, so we no longer certify desktop drives because these reason above, after all reliability is one important reason why customers choose hardware raid controllers.
