

**2018 to 2020**

**Q10021107 - I am having an issue with an Arc-1880x connected to a Dell MD1000. The issue is that the controller sees the disk shelf itself but not the disks inside of the shelf. One time the RAID card saw there are disks in the shelf. I created a RAID set, but when I rebooted the server, the RAID controller once again could not see any disks.**

It has solved by the version 1.49 firmware date: 2011-6-9.

Unique solution ID: #1412
