

2018 to 2020

Q10021110 - Our customer intends to use Supermicro 24 bays storage, it's important to boot from USB flash drive together with 24 units of hard disks from ARC-1680ix-24. I tested to attach any 8 channels for booting from USB flash drive without problem, but if I attach any 12 channels the MB fail to boot from USB flash drive.

We've experienced the same issue with LSI host card, but the issue can be solved after changing maximum INT 13 devices from LSI firmware setting. The issue from M/B BIOS can not work with INT13 device more than 12 from the RAID adapter. We have one workaround BIOS to bypass this issue.

Unique solution ID: #1424
