Q10011701 - Can we put the ARC-1883ix into Dell PowerEdge R730?

Dell PowerEdge R730 backplane can work with ARC-1883i/LP. ARC-1883ix needs to update the expander firmware: sas3xfw170105B0.fw or later to work with Dell PowerEdge R730 backplane. Use the follow CLI commands to set parameters,

```
CLI> st default
```

```
CLI> sys -z 100C
```

```
Target Port 0x100C
```

```
CLI> st
```

Power cycle the whole system again.
