

2018 to 2020

**Q10021701 - HP Z800 workstation hangs at boot
(after POST, before OS load) if bootable device is
not the only volumes connected to 1882i.**

The problem appears to be the 1.54 BIOS/firmware package. It only happens on special M/B. Reverting from 1.54 BIOS code to 1.53 BIOS code resolves the hang issue.

Unique solution ID: #1640
