

2018 to 2020

Q10021807 - I receive the message "No BIOS disk found. RAID Controller BIOS not installed" though it does display the 4Kn volume listed in the VMware.

Raid BIOS will be installed only if there has bootable volume existed. If your volumes are created by 4Kn drives, it is not bootable.

Please check the following FAQ link for VMware support 4Kn devices.
