

2015 to 2017

Q10151501 - ARC-1224-8i RAID controller with Supermicro X10DRG-Q in slots 9 (PCH slot) under Win7 Pro x64, the option ROM for the card doesn't load and can't boot from it.

This motherboard supports the latest Thunderbolt technology. The PCH SLOT9 is PCI-Exp. 2.0 x4 in x8 slot with TBT support (from Intel PCH). Intel does allow user to boot devices from Thunderbolt port under Windows system. The option ROM does not load on this slot. Disabling "Ignore Thunderbolt Option ROM" on M/B BIOS will execute TBT Option Rom at POST time.

Unique solution ID: #1015
