Q10011807 - Does ARC-1883i RAID controller support secure boot for VMware 6.5?

Our VMware certified driver can support secure boot from the following installation.

(1). Update the ARC-1883I BIOS code to the newest BIOS using Microsoft signed UEFI driver.

(2). Install VMware-ESXi 6.5 with VMware-ESXi-6.5U1-RollupISO.iso or VMware-ESXi-6.5U2-RollupISO.iso by disable secure boot. After installation completed then reboot.

(3). Checking secure boot success or not by:

```
/usr/lib/vmware/secureboot/bin/secureBoot.py -c
```

It displays: Secure boot can be enable.

(4). Reboot system and Enable secure boot in system BIOS. Booting works with secure.

Unique solution ID: #1749
