2018 to 2020

Q30011907 - When I try to download this driver install_arcsas-20180828 our I.T. department identifies this as containing malware and blocks the download.

The installer contains driver and management tool. The management tool has background service which should be the reason of the warning. If you have concerned about it, you can install the driver without installing the management tool.
