Q10031404 - I always meet the problem that said "no rules to make target 'kernel/bounds.c', need by 'kernel/bounds.s'. Stop", when install Areca linux source 1.30.0X.16-131015 version driver in Debian-6.08 64bit.

You need to make sure when you compile your code it's pointing to the linux source and not the headers. Please reference the similar discussions on internet.
