

**2014**

**Q10021110 - Our customer intends to use Supermicro 24 bays storage, it's important to boot from USB flash drive together with 24 units of hard disks from ARC-1680ix-24. I tested to attach any 8 channels for booting from USB flash drive without problem, but if I attach any 12 channels the MB fail to boot from USB flash drive.**

We've experienced the same issue with LSI host card, but the issue can be solved after changing maximum INT 13 devices from LSI firmware setting. The issue from M/B BIOS can not work with INT13 device more than 12 from the RAID adapter. We have one workaround BIOS to bypass this issue.

Unique solution ID: #1424
