

2014

Q10151012 - I'm running OpenBSD 4.6 i386 on an Areca ARC-1680i controller. Unfortunately, bioctl doesn't show the array status (online, degraded, failed, etc.).

Areca cards do not support bioctl, please use our cli instead.

The bioctl- RAID management interface for software RAID, but our products are pure hardware raids.

Unique solution ID: #1477
