

2015 to 2017

Q10021701 - HP Z800 workstation hangs at boot (after POST, before OS load) if bootable device is not the only volumes connected to 1882i.

The problem appears to be the 1.54 BIOS/firmware package. It only happens on special M/B. Reverting from 1.54 BIOS code to 1.53 BIOS code resolves the hang issue.

Unique solution ID: #1640
