

Q10011006 - I used GPT and NTFS which is supposed to work to 256TB. I expanded it from 14TB to 16TB without issue but for some reason I can't consume all the free space from the newly expanded VolumeSet.

It is limited to partition size of 16TB when you chose 4KB clusters. If you had chosen 64KB clusters you could have had a partition of 256TB.
