Q10010903- I created 5x1TB RAID 5 array w/ 5 Samsung F1 1TB drives. Things worked fine. Then I wanted to add an additional group of Samsung F1 drives to the array but the ARC-1280 firmware 1.43 was having an issue with the newly attached drives and they were showing up as "failed" in the Raid Console (and the ARC-1280 was beeping, driving me crazy).

After some messing, I eventually upgraded the ARC-1280 to the latest firmware version 1.46 and now things are working great.
