

Q10010906 - I added a new raidset and volume using the CLI. I had no problems.

I issued the command:

rsf offline raid=2

Now the raidset no longer appears anywhere in the CLI. There is no "online" command p0. How do I get this raid volume back online without rebooting?

Off line a raidset, it means you would like to physically remove this raidset. If you would like to add one off line raidset back, you have to physically remove this raidset and put it back.
