

Q50011508 - Does ARC-8018 expander allow to turn each 12Gb/s SAS disk on and off? via CLI

Our expander CLI support power can power on/off the drive by utilizing SAS Power Disable feature defined by T10 (i.e. drive Pin 3 high) for remote management of the end device.

```
CLI> sys -D slot-index Power-Value[0 | non-zero] ;; turn disk power on/off
```

Unique solution ID: #1396
