

Q80062009 - Does ARC-8050T3/T3U RAID storage have any issue with Gigabyte X299X Designare 10G M/B?

The Gigabyte X299X Designare 10G can work with ARC-8050T3/T3U RAID storage using passive Thunderbolt cable. It has issue using Thunderbolt active cable when it bootup from a warm boot. But when ARC-8050T3/T3U RAID storage connected, through a hot plug event using Thunderbolt active cable, it works great.
