

Q80012206 - I just upgraded to the new M1 Mac Studio Ultra running Mac OS Monterey. The ARC-8050T2 drives will mount but I can't seem to log into them and manage the raid or JBODs.

Monterey 12.3 has removed python in OS but our old version Archttp script will call python to launch the browser with properly IP address for your management. The version 2.7.0 Archttp on the website has fixed this issue.

Unique solution ID: #1984
