

# **Q80021801 - The ARC-8050T3-12 needs to partition it in Disk Utility it says the partition map is not supported and the partition button is grayed out.**

macOS 10.13's Disk Utility 17.0 (1626) does not recognize unformatted disks unless you click View > Show All Devices, quit Disk Utility, then relaunch it. But Diskutil does recognize the drive. You use it to perform a quick, cursory format (e.g., `diskutil eraseDisk JHFS+ NewDisk GPT disk0`) to make the disk appear in Disk Utility. The link below found on internet.
