Q10051807 - Does ARC-1883ix UEFI mode work with Asus board?

ARC-1883ix UEFI had been tested with various vendor motherboards without problem found included Asus Z87 board in lab. If your motherboard supports both INT13 and UEFI BIOS, you have to choose UEFI in controller setting to make sure of working under UEFI mode. Please also check the motherboard bios setting to allow adapter option ROM to work with UEFI mode.
