Q50021403 - Should I do something on 12G Expander when I am going to increase performance?

12Gb/s expander DataBolt™ Bandwidth Optimizer is designed to help facilitate the industry transition to 12Gb/s SAS-enabled systems by allowing users to take advantage of 12Gb/s speeds while utilizing existing 6Gb/s drives or backplanes. Use for 3G/6G SAS/SATA drive speed up as 12G drive performance. The function is default not enable on the firmware. Use the DHPM Command on the CLI interface to enable it .
