Q80021403 - I just bought an ARC-8050T2. How to set encrypt data using the full volume encryption.

The procedures are quite simple. There has no extra password needed, only the key file is necessary. Procedures are as below:

1. Create volumes with encryption enabled

2. Use cli command to generate the key file.

3. Unlock the volume, execute the 'download volume key' feature in web manager, in volumeset function menu or you can use dlkey feature in cli, vsf command.

Volume will appear in system once you load the key file that is generated by cli.
