Q80011911 - Does ARC-8050T3 RAID storage have any issue with Gigabyte Z390 Designare M/B?

ARC-8050T3U RAID storage is based on the Intel Thunderbolt TitanRidge JHL7440 Controller. But it has issue with Gigabyte Z390 Designare M/B that is based on Intel Thunderbolt TitanRidge JHL7440 Controller using NVM firmware version 33. There has no issue from similar ASUS product using NVM firmware version 35.

Gigabyte Z390 Designare can work with ARC-8050T3U RAID storage from engineering version number "B".

Unique solution ID: #1880
