

**2016 to 2020**

**Q80011912 - ARC-8050T3U-8 with the USB type C to type A adapters looks like the performance drops to USB2.0 speed which is about 35-40Mb/s but we should expect about 400MB/s USB 3.0 host.**

ARC-8050T3U includes one Thunderbolt 3 active cable and one USB Type C cable in the shipping package. The currently Thunderbolt 3 active cable based on Cooper Bridge only supports Thunderbolt 3 and USB 2.0 protocol. You need to use the USB 3.2 cable with the USB Type C to type A adapter to get the real USB host performance. In the future new 1-2m TBT 40Gbps Thunderbolt™ 3 cable based on Delta Bridge (new Re-timer) will be updated to support Thunderbolt, USB, DP for increasing cable length.
