

**2016 to 2020**

**Q80021912 - ARC-8050T3U-4 sets the EFI option in the advanced settings, installed the latest macOS (10.15.2) and set the startup disk to the raid, but when I am in the startup manager and press the key combination shift-option-command-period, I do not get the option to use the raid as a startup disk.**

Please set the uEFI option in the advanced setting to use the ARC-8050T3U raid as a startup disk.
