

## 2016 to 2020

**Q80012009 - I just changed the admin password from 0000 to a new password (long word + number + #) and now I can't login to the web interface anymore (not with the old 0000 and not with the new password).**

Our originally password only accepts word + number. From firmware latest version, it can accept word + number + symbol classes as valid password values.
