

2021 to 2025

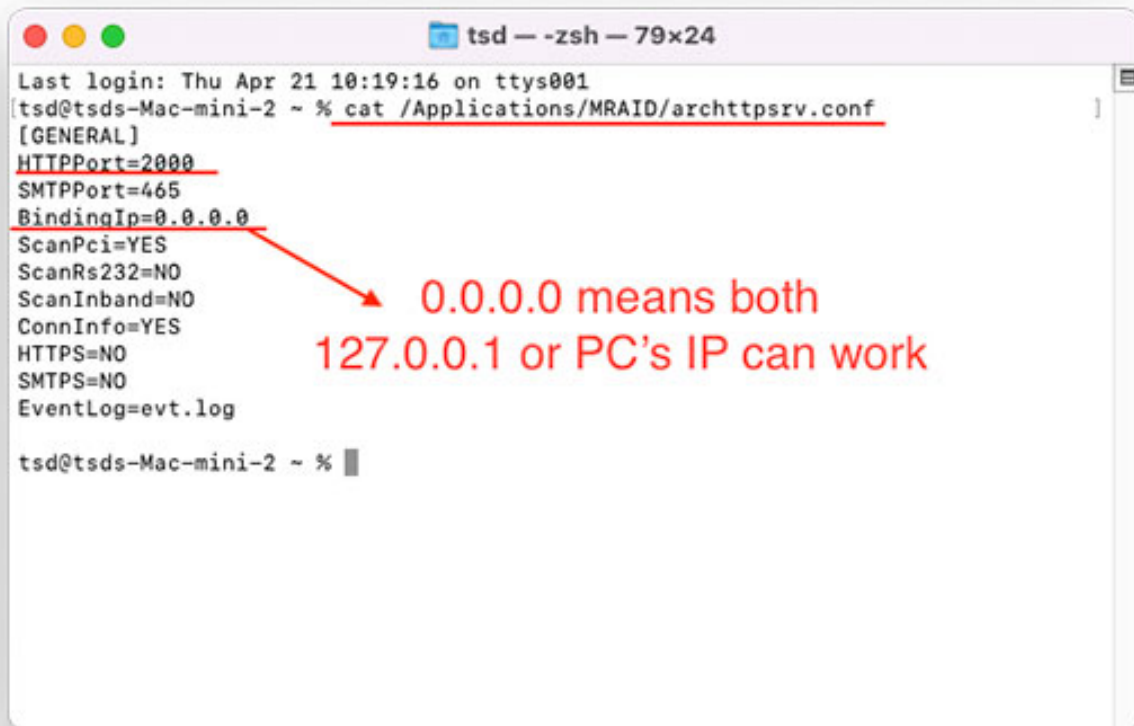

Q80012204 - The arcHTTP64 script invokes `usr/lib/python`, which is not implemented anymore in macOS 12.

Monterey 12.3 has removed python in OS but our script will call python to launch the browser with properly IP address for your management. Please manually launch your browser and type in the IP address to login the web console. The default IP address and port number are **127.0.0.1:2000** or **localhost:2000**.

If you type the default IP address and still cannot launch the web console, please use the command line '`cat /Applications/MRAID/archttpsrv.conf`' to look up your IP address. (As shown in the image below)

2021 to 2025

```
tsd — -zsh — 79x24
Last login: Thu Apr 21 10:19:16 on ttys001
[tsd@tsds-Mac-mini-2 ~ % cat /Applications/MRAID/archttpsrv.conf
[GENERAL]
HTTPPort=2000
SMTPPort=465
BindingIp=0.0.0.0
ScanPci=YES
ScanRs232=NO
ScanInband=NO
ConnInfo=YES
HTTPS=NO
SMTPS=NO
EventLog=evt.log

tsd@tsds-Mac-mini-2 ~ %
```

0.0.0.0 means both
127.0.0.1 or PC's IP can work

Unique solution ID: #1982
