Q30011001 - My system has two ARC-1300ix-16 host adapters, and I'm experiencing four passes of the bios during bootup. This makes the bootup process very long, but the HBA's function fine once booted.

The host adapter bios bootup screen may show 4 times when there have no any device connected. If there have devices connected, the BIOS in second HBA will not execute and only 2 BIOS message appears.
