

Q10052009 - We use a ARC-1882i in JBOD mode and i noticed that it does not presents enclosure/slots to the system.

ARC-1882 is a hardware raid controller not a SAS HBA. You can monitor enclosure/slots through our manager tools only. No matter which mode you configured, all these devices you saw in OS are logic devices. you cannot directly communicate with hard drives even in JBOD mode.

Unique solution ID: #1915
