

## **Q10082103 - When iMac with MacOS 11.2.3 is in sleep mode, the ARC-8050T3 Raid storage is powering on every hour at the events log.**

MacOS 11.2.3 has an “Enable Power Nap” option that allows checking mail and certain backup activities while the iMac Pro is in sleep mode. The Areca RAID array would spontaneously turn on about every hour while iMac was in sleep mode. MacOS 11.2.3 turned off the “Enable Power Nap” option, the ARC-8050T3 has not been waking up while iMac Pro is sleeping.
