

Q10022106 - There has not seen any drives status direct in ESXi-7.0U1c-17325551 under Hardware - Storage - . The controller is seen as status unknown. Cim provider (1.0.4-21.04.27.180600) is installed.

Areca raid controllers are pure hardware based, so it is normal that system can not see physical drives after raid adapter. All these devices shown on system are logic devices (volumes). With cim provider installed, you can use alc to inquiry drive status from network.

Unique solution ID: #1967
