

Q10022111 - Does ARC-1203-2i work to boot mirrored SSD in VMware versions 7.0u3 or 6.7u3?

To boot vsphere 7.0u3 or 6.7u3 from ARC-1203 raid volume, you have to install the system to raid volume. But in vsphere 7.0u3 or 6.7u3 default does not have build-in areca raid driver. So you cannot install vsphere to ARC-1203 raid volume. In order to install vsphere to ARC-1203 raid volume, you need to build a vsphere customized ISO file with build-in areca raid driver.

To build a ESXi 7.0 U3 custom iso with arcmsr driver component

```
=====
```

On Windows, run the Microsoft PowerShell.

```
Add-ESXSoftwareDepot -DepotUrl D:\Areca\VMware-ESXi-7.0U3-18644231-depot.zip
```

```
Add-ESXSoftwareDepot -DepotUrl D:\Areca\VMW-esx-7.0.0-arcraid-2.00.00.06-1OEM.650.0.0.4598673.zip
```

```
Get-ESXImageProfile
```

```
New-ESXImageProfile -CloneProfile ESXi-7.0.3-18644231-standard -Name ESXi-7.0.3-18644231-arcmsrn
```

Type arc for required vendor:

```
Add-ESXSoftwarePackage -ImageProfile ESXi-7.0.3-18644231-arcmsrn -SoftwarePackage arcmsrn
```

```
Export-ESXImageProfile -ImageProfile ESXi-7.0.3-18644231-arcmsrn -ExportToIso -FilePath D:\Areca\ESXi-7.0.3-18644231-arcmsrn-2000006.iso
```
