Q80011907 - What's command to download macOS system log at /var/log/messages?

You can use below command to download the system log.

A screenshot of a macOS terminal window. The title bar shows a home icon, the name 'tsd', and the shell '-bash' with window dimensions '153x24'. The terminal content shows the prompt '[xserv5:~ tsd\$' followed by the command 'cp /var/log/system.log ~/Desktop/'. The next line shows the prompt 'xserv5:~ tsd\$' with a cursor, indicating the command has been executed.

```
[xserv5:~ tsd$ cp /var/log/system.log ~/Desktop/
xserv5:~ tsd$
```
