

2009 to 2011

**Q10030902- I need the Windows 2000 Advanced
Server driver for the ARC-1222 SAS v1.0 RAID
controller.**

The current Windows driver can work with Windows 2000, you can download the XP one for your controller. Please make sure that your system has the latest service pack installed already, since the driver needs latest service pack.

Unique solution ID: #1514
