2009 to 2011

Q10010903- I created 5x1TB RAID 5 array w/ 5
Samsung F1 1TB drives. Things worked fine. Then
I wanted to add an additional group of Samsung
F1 drives to the array but the ARC-1280 firmware
1.43 was having an issue with the newly attached
drives and they were showing up as "failed" in
the Raid Console (and the ARC-1280 was beeping,
driving me crazy).

After some messing, I eventually upgraded the ARC-1280 to the latest firmware version 1.46 and now things are working great.
