

2024

Q90042411 - After every 3.5-4.5 hours, the storage on the ARC-1203-2N RAID controller becomes unavailable (failed) for the Proxmox operating system. Only "Time Out Error" information was found on the ARC-1203-2N.

NVMe raid adapter needs longer process time compared with single NVMe drive directed on the mainboard PCIe bus, so you have to extend the NVMe device latency value in your system to avoid this error. Parameter as following for example:

```
nvme_core.default_ps_max_latency_us=3900
```

Unique solution ID: #2058
