2009 to 2011

Q10011005 - Customer use ARC-1280ML (1.48 firmware) with Supermicro X8DTE (intel 5520 chip), X8DT3-LN4F and Asus Z8PE-D18, OS is Windows 2008 64bit (they use Windows 2003 64bit also), every time he finish initialize volume (RAID 5 or 6), his system will show blue screen. If he downgrades 1280ML to 1.47, everything works fine.

It caused the special version boot code problem on the intel 5520 chip set. User can upgrade the bootcode file from Areca ftp to fix it.

Unique solution ID: #1457
