

Q10091807 - Is there any compatible issue with Toshiba 14TB disk drives (MG07ACA14TE)?

The only issue appears to be an Initialization Mode such as Foreground Initialization. While the initialization starts OK it fails after less than 2-3 minutes. Setting the "Write Same for Initialization" to disabled rather than the default of SAS/SATA Write Same has resolved the initialization issue.

Unique solution ID: #1757
