2011 to 2015

Q40021504 - Is ARC-8088-iSCSI controller just MPIO or it supports MC/S also?

Port teaming and MC/S are not supported, please use MPIO instead. MPIO does much the same job as teaming & MC/S for failover and bandwidth aggregation. Furthermore, it is not limited within the same controller -- it works across controllers under Dual Controller mode.
