

2024 to 2025

Q90032411 - Can ARC-1886-16i card work with Broadcom cable and Areca cable, a x8 SFF-8654 to x8 U.3 SFF-8639 connection using Micron 7540 U.3?

Dual mode (with both U.2 and U.3 interfaces) NVMe drives may not work without PCIe reset signal. Reset signal is necessary for U.2 connection but not U.3 connection, so Broadcom and Areca x8 SFF-8654 to x8 U.3 SFF-8639 connection cable do not send reset signal. They can only support U3 only not support dual mode (with both U.2 and U.3 interfaces) NVMe drives; such as Micron 7540 U.3.

Unique solution ID: #2057
